Growing Tips for SUMMER WAVE®

- Prefers warmer production temperatures; cold, wet conditions can stunt growth.
- Light shade is best for optimal growth.
- Needs 200 ppm fertilizer.
- Application of Florel® delays flowering 8-10 weeks – however, this is not the case in California.
- Best in gallons and baskets.
- Bronze foliage can be indicative of too high light in production and/or too cold of temperatures. Bronzing will not go away, and plants must grow new foliage without the damage.
