

SUPERBELLS®

Calibrachoa hybrids

SUPERBELLS® Lavender
Calibrachoa hybrid ^{USCAL56501} ^{USPPAF} ^{CanPBRAF}

Superbells' superb color, heat tolerance, disease resistance, and large blooms make this series a star performer. With growth habits that range from the small and compact to the cascading, Superbells create endless possibilities in the landscape and in containers.

Growing Tips:

Keeping plants too wet can lead to root rot diseases. Allow the top of the soil to dry before watering again. If your plant is wilting even though the soil is still damp you likely have a root rot problem. Self-cleaning, no deadheading necessary.

Exposure: Full sun

Height: 7-10"

Spacing: 8-10"

Hardy Temp: 25°F (-4°C)

Uses:

Calibrachoa do not like to have constantly damp soil. They will do well in the ground only with good drainage. For most gardeners containers are the best use for Calibrachoa.

Features:

Abundant, small Petunia-like flowers all season on cascading growth; attracts hummingbirds.

Growing Tips for SUPERBELLS®

- Preventive fungicides are recommended at transplant.
- Requires high light in production.
- Needs 200 ppm fertilizer for optimal growth.
- Keep pH between 5.5 and 5.8.
- Coral is more sensitive to high pH. Yellow tips are often an indicator of high pH.
- Blue has a tendency to stretch under low light conditions.
- Red and Cherry Red are very responsive to PGRs, so lower rates should be used.
- Cold is a good natural growth regulator.
- Tequila Sunrise will require several pinches if brought in with the rest of the series. It responds well to a pinch at liner planting.
- Blue, Scarlet, Tequila Sunrise, Peach, and Dreamsicle have upright growth habits in lower light early production and may require extra pinching and PGR.

Additional Culture Information for SUPERBELLS®

pH/EC: 5.5 - 5.8 / .6 - .9
 Growing Temperature: 65-72°/55-65°
 Holding Temperature: 40-50° outdoors
 Water Requirements: Moderate to Moist
 Planting and Timing: Early Spring through Fall Finish.
 Standard Plants Per Pot.
 Finish Times in Weeks: For 4-5", 4-6; for 6"/gallon, 5-7; for 8", 7-9; for 10-12", 10-12
 Spring Outdoor Finish: Second to go outside

Point of Purchase:

Order online at shop.provenwinners.com today.

Notes:

For pots 6" and smaller, pinch at transplanting only. For hanging baskets and pots larger than 6", soft pinch at planting and trim around pot just prior to hanging. 5-10 ppm Sumagic® or a B-9/Cycocel (2500/750) tank mix is effective. Use 500 ppm Florel® on baskets and larger pots to promote branching. Calibrachoa are sensitive to pythium, phytophthora, and thelaviopsis, but Superbells have higher levels of tolerance to these diseases. Proper pH and good sanitation practices help alleviate problems. Increased air circulation, proper water management, and good soil porosity are also critical. Scout regularly for aphids, especially in baskets.
